

Edifixio helps Rémy Cointreau Group to manage its AWS accounts

Executive Summary

Rémy Cointreau Group has migrated a big part of its IT infrastructure to AWS over the last five years.

Since beginning of 2020, Edifixio teams are in charge of the outsourcing of infrastructure already migrated at AWS.

Customer Challenges

The customer managed several separate AWS accounts.

The payer account also contained some workloads. No single-sign-on solution was deployed at that time. Creation of new AWS accounts was needed for new business needs, and separation of duties.

Partner solution

Edifixio proposed to deploy AWS Control Tower to manage all of the AWS accounts. Best practice is to have the minimum set of services running in the payer account.

Thus, a new account was created to be the payer account. All other accounts were attached to this new organization.

AWS IAM Identity Center was setup to manage access to the accounts. A SAML federation with Rémy-Cointreau Identity Provider was configured to have a centralized access.

About Rémy Cointreau

Rémy Cointreau is a French family-run Group whose origins date back to 1724.

The Group is also the result of successive partnerships with other companies active in the same wines and spirits business lines.

A love of our terroirs and the mastery of time have always been at the heart of our expertise. It is up to each and every one of us to allow this link between the land, people and time to coexist harmoniously side by side.

Backed up by a portfolio of striking, high-end brands, the group's aim is to establish itself as the world leader in exceptional spirits.

Results and Benefits

The project started beginning of November 2021 and spanned over several weeks mainly due to business constraints and availabilities.

The Rémy Cointreau IT team can now create new AWS accounts more easily.

It also have a centralized billing for all of its workloads. Also, integration with their internal identity provider facilitates user access and management.

Usage of AWS Control Tower to provision accounts also ensures that some compliance to best practises is in place (activation of AWS Config, CloudTrail, ...).
